Create a JSP file having a textbox and a button and display the contents of the textbox using a servlet when the button is pressed.

index.jsp

```
<!DOCTYPE html>
<html>
   <head>
      <meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
      <title>JSP Page</title>
   </head>
   <body>
      <h1>Test JSP page</h1>
      <form method ="post" action="HelloServlet.java">
         Type Here: <input type="text" name="box" id="box"><br>
         <input type="submit" name="submit" value="Press Here">
      </form>
   </body>
</html>
```

HelloServlet.java

```
package server;

import java.io.*;
import javax.servlet.*;
import javax.servlet.annotation.WebServlet;
import javax.servlet.http.*;

@WebServlet(
      name = "HelloServlet",
      urlPatterns = {"/HelloServlet.java"}
)

public class HelloServlet extends HttpServlet {

   @Override
   protected void doPost(HttpServletRequest request, HttpServletResponse response)
         throws ServletException, IOException {
      String text = request.getParameter("box");
      boolean submitButtonPressed = request.getParameter("submit")!=null;
      PrintWriter out = response.getWriter();
      out.println(text);
   }

}
```
